

TSUBAKI

PIN GEAR DRIVE UNITS

Standard Series/S Series

The Tsubaki pin gear drive unit is a new drive unit that replaces gear rack systems.

The combination of a pin-structure wheel/rack and a gear with special tooth profile allows greater freedom when designing rotating or linear drive units.

Features

- **Easy installation**
 Employs a separable segment design to ensure easy installation.
 Can be used even with rough installation precision.
- **Large transmission torque**
 Pin gear is designed in forging modules and good pin wheel/rack balance delivers large transmission torque.
- **Can be used in large-scale equipment.**
 Wheel type units can be employed in large drive units by increasing the number of segments.
- **Wide applications**
 Available in steel, stainless steel, and surface-coated models.

Drive system	Installation man-hours	Transmission torque	Large equipment	Cost
Pin gear drive	○	○	○	○
Ordinary gear	△	○	△	×
Chain-type pin gear	△	○	○	◎

Configurations

A pin gear drive unit is a set consisting of pin gear and pin wheel (or pin rack).

Rotational drive

Pin wheel diameter (number of pins) can be chosen freely.

Linear drive

Pin rack length (number of pins) can be chosen freely.

Structure

Pin gear feature specially designed teeth that engage continually and smoothly with the rollers. Teeth are hardened to improve strength and wear resistance.

Unique Tooth Profile

The tooth profile is based on an approximate involute to ensure that it can engage smoothly with the pin wheel/rack, and employs a unique design to further increase strength.

Standard Specifications

Pitch mm	Standard Series (Steel)		S Series (Stainless)	
	Frame No.	Allowable Tangential Load Fp (kN)	Frame No.	Allowable Tangential Load Fp (kN)
20	PDU20	4.7	PDUS20	0.8
22	PDU22	7.7	PDUS22	1.1

*The above backlash amounts are calculated figures and are not guaranteed values. Contact Tsubaki if smaller backlash is desired.

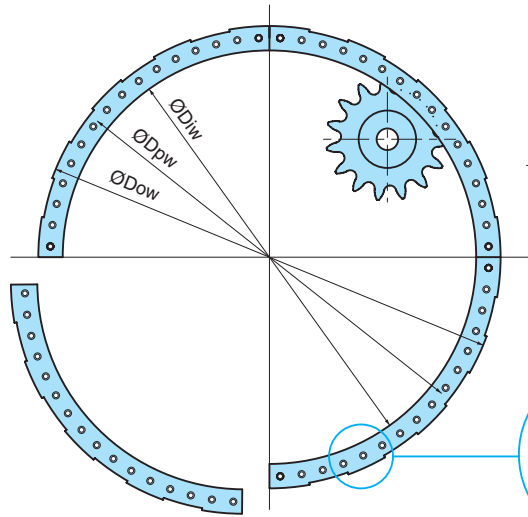

Pin Wheel Products and Specifications

Standard Series (Steel) and S Series (Stainless)

Outer drive pin wheel
(4-segment model shown)

Inner drive pin wheel
(4-segment model shown)

- Notes:
1. There are projections on the inner rim of outer drive pin wheel segments and on the outer rim of inner drive pin wheel segments. These projections serve as the reference surface when installing the pin wheel on the device with which it is to be used.
 2. The inner diameter (Diw) of outer drive wheels and the outer diameter (Dow) of inner drive wheels are respectively the outer/inner diameter of the device with which the pin wheel is to be used.
 3. See page 8 for installation instructions.
 4. Mounting bolts are not included.
 5. We can produce pin wheels with roller quantities other than those noted in this catalog.
 6. We can also make pin wheels for partial circumferences (i.e. less than 360°).

Example Model No.

P D U 7 0 - G W - 7 0 P

Frame No.	Pin Wheel	Roller Qty
PDU : Standard series	GW : Outer drive	
PDUS : S series	NW : Inner drive	

Reference:

Example model No. for pin wheel with partial circumference (i.e. less than 360°).

P D U 7 0 - G W - 3 0 / 9 0 P

Required Roller Qty	Roller Qty for Full Circumference

Notification of Changes to Specifications (From April 2012)

- All frame pins are with hollow type (bush).
- S series (stainless) models are now the same structure as the standard series. (Consult us if you require models with old specifications due to replacement or other reasons.)

* We can produce products with roller quantities other than those indicated above.

Pin Rack Products and Specifications

Flat Rack (FR)

Angle Rack (AR)

* Hollow pins are secured with nuts and bolts to secure the rack on angle models.

Notes:

1. Long pin rack configurations can be calculated by multiplying the standard length by N pieces or by multiplying the standard length by N pieces and then adding the required number of rollers shorter than standard length.
We can produce products with roller quantities other than those indicated here.
2. See page 8 for installation instructions for flat racks.
3. Mounting bolts are not included.

Lock type Pin Gear

*Pin gear tooth profile differs according to application (outer/inner/linear drive).

■ Installation

Inner drive Pin Wheel

Flat Racks

The side of the rack/wheel can be attached to the device with a bolt using the hole in the hollow pin.
When installing, a stopper or guide can be fixed to the projected surface to position the wheel.

Angle Racks

Angle racks can be attached to the device using the mounting bolt holes on the feet of the rack.

■ Mounting Bolt Position

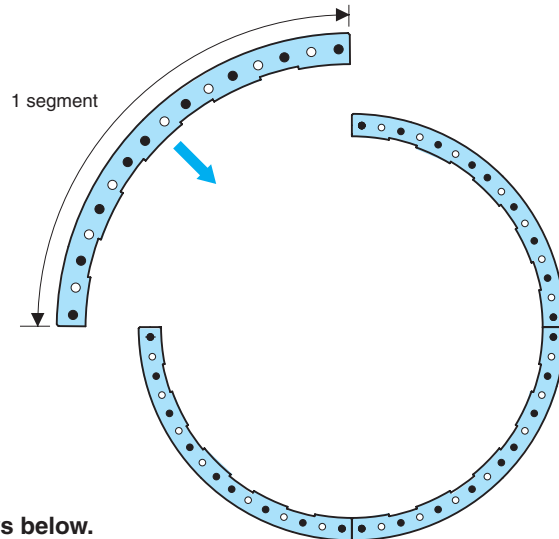

At least the minimum number of bolts (see table below) must be used at both end of each segment and at regularly spaced intervals in between.

■ Minimum Mounting Bolt Quantity per Segment for Pin Wheels & Flat Racks

Type	Frame No.	Mounting Bolt Size	Minimum Qty
Standard Series	PDU20	M4	8
	PDU22	M4	13
	PDU30	M6	10
	PDU35	M8	8
	PDU40	M10	7
	PDU50	M12	6
	PDU55	M12	9
	PDU70	M16	6
	PDU80	M16	7
	PDU90	M20	6
PDU120	M30	4	
S Series	PDUS20	M4	8
	PDUS22	M4	13
	PDUS30	M6	10
	PDUS35	M8	8
	PDUS40	M10	7
	PDUS50	M12	6
	PDUS55	M12	9
	PDUS70	M16	6
	PDUS80	M16	7
	PDUS90	M20	6

Example: Bolt mounting : PDU55-GW-64P 4-segment model
Mounting position : See figure below.
(Mounting bolt positions indicated by black dots.)

PDU55 requires a minimum of 9, M12 mounting bolts.
Install at least 9 bolts per segment as evenly as possible.
* Contact Tsubaki if you are unsure about installation.

■ Mounting bolts: Use the hexagon socket cap screws below.

Standard series: JIS strength 12.9

S series: JIS strength 50

■ Pin Wheel/Pin Rack Segments

See below for example pin wheel/pin rack segment configurations. Always check production drawings, etc., when ordering.

Example 1: Pin wheel

Model No. PDU30-GW-190P

8 segments (See Specifications Table on page 4.)

Configuration is: { 23/190P x 2 segments
and
24/190P x 6 segments

Example 2: Pin rack

Model No. PDU30-FR-200P

Number of standard length rollers: 26 Minimum roller quantity: 10 (See Specifications Table on page 6.)

Configuration is: { 26P x 7 pieces
and
18P x 1 piece

Pin Gear Drive Selection Procedure

■ Selection Procedure

1. Pre-select the pitch circle diameter of the pin gear drive unit

- For rotational operation: Pre-select the pitch circle diameter of the pin wheel to suit the size of the equipment. Find out the reduction gear ratio required, then pre-select the pitch circle diameter of the pin gear.
- For linear operation: Pre-select the pitch circle diameter of the pin gear based on the equipment layout.

2. Calculate the applied tangential load (Fw)

Calculate the applied tangential load (Fw) that will act on the pin wheel or pin rack based on load conditions.

3. Calculate the corrected tangential load (Ft)

To calculate the corrected tangential load (Ft), obtain the service factor (Ks, Table 1) based on operating conditions, obtain the speed factor (Kv, Table 2) based on the tangential speed, and then multiply the product thereof by the applied tangential load (Fw).

$$F_t = K_s \times K_v \times F_w$$

4. Select the frame number of the pin gear drive unit.

Using the allowable tangential load (Fp) of each pin wheel/pin rack frame number and the corrected tangential load (Ft), select the appropriate pin gear drive unit that satisfies the following condition:

$$\text{Allowable tangential load (Fp)} > \text{Corrected tangential load (Ft)}$$

5. Select the model number

- Pin wheels: From the selected frame number and the pre-selected pin wheel pitch circle diameter, choose the quantity of rollers of the pin wheel closest to the pitch circle diameter.
- Pin racks: From the selected frame number and the total running distance (or total movement distance), calculate the quantity of rack rollers.
- Pin gears: From the selected frame number and the pre-selected pin gear pitch circle diameter, choose the model number of the pin gear with the number of teeth closest to the pitch circle diameter.

Note: There are limits to the extent to which numbers of gear teeth can be used. (See table on page 7.)
If a gear does not have enough teeth, select a gear with a larger number of teeth.

Table 1: Service Factor (Ks)

Operation Status	Operating Hours/Day		
	Up to 3 hrs	Up to 12 hrs	Up to 24 hrs
Even load	1.00 (1.25)	1.15 (1.40)	1.25 (1.50)
Load with small impacts	1.25 (1.50)	1.40 (1.70)	1.60 (2.00)
Load with large impacts	1.50 (1.80)	1.75 (2.15)	2.00 (2.50)

Use values in parentheses if operation stops 10 or more times an hour.

Table 2: Speed Factor (Kv)

Tangential speed: 50m/min.								
0	10	15	20	25	30	35	40	50
1.02	1.04	1.05	1.06	1.06	1.07	1.08	1.1	1.2

Note: Allowable tangential speed is 50 m/min. for all frame numbers.

Lubrication

Before operation, coat all peripheral roller surfaces with extreme pressure grease. The interior of pin wheel and pin rack rollers are pre-coated with lubricating grease. Contact Tsubaki if using in environments where lubricating grease cannot be used, such as under water, or if using at temperatures of 130°C or higher.

Special Specifications

We can produce models with the specifications indicated below. Contact Tsubaki for more information.

Surface treatments	<ul style="list-style-type: none"> ● Blackening Good appearance and effective against rust. ● Electroless nickel plating Corrosion- and wear-resistant characteristics. ● NEP treatment (proprietary Tsubaki surface treatment) NEP treatment with excellent corrosion- and weather-resistant characteristics.
Lock type pin gears	<ul style="list-style-type: none"> ● Pin gear with friction fastening mechanism (Easy phase adjustment. See page 7 for details.) (Not available in S series.)
Low backlash	We can make products with only two-thirds or half the standard amount of backlash.

Installation Precision

· Pin wheels: Projections on the pin wheel frame share the same centers as the roller mounting holes, so projections can be used as a reference surface for centering when fitting the pin wheel into the pilot section on the equipment. The precision of equipment pilot section must be finished within the precision of pilot section runout indicated in the table below.

· Pin racks: Ensure that the parallelism of the equipment-side mounting reference surface of the pin rack and the pin gear center is equal to or less than the indicated value of gear center parallelism in the table below by ensuring that the machine is correctly aligned in advance.

Ensure that the alignment along the A and B axes of adjoining pin racks is within the tolerance indicated in the table below.

*Always read the instruction manual before installing.

Frame No.		PDU20 PDUS20	PDU22 PDUS22	PDU30 PDUS30	PDU35 PDUS35	PDU40 PDUS40	PDU50 PDUS50	PDU55 PDUS55	PDU70 PDUS70	PDU80 PDUS80	PDU90 PDUS90	PDU120

Reference Material concerning Corrosion Resistance in the S Series

Corrosion resistance may be altered significantly depending on conditions of usage and the table below does not indicate any level of assurance. Refer to the table below and use a test sample under actual conditions of usage to confirm corrosion resistance before use.

○: Sufficient corrosion resistance △: Corrosion resistance depending on operating conditions ×: No corrosion resistance —: Uncertain

Example Uses 1

■ Environmental sanitation equipment

■ Welding roll over

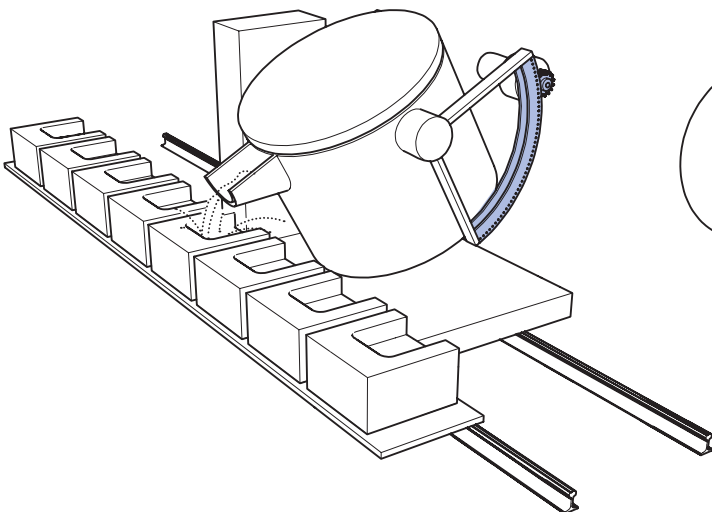

■ Railroad turntable

■ Revolving door mechanism

■ Casting line

■ Rotary kiln

Example Uses 2

■ Drive for large transporter

■ Solar tracking system

■ Pallet changer for machine tool

■ Handling robot

■ Pallet pool for machine tool

Safety Precautions

WARNING Observe the items below to prevent danger.

- Check that no torque is acting on the rotating shaft of the product or the equipment before installation and before performing maintenance and inspection work.
- Product function or performance may be adversely affected by mounting accuracy and load conditions or the wear and life of parts used. Implement safety measures for the equipment in advance and regularly perform maintenance and inspections.
- Follow all applicable local safety regulations as required.
- Observe the following when installing, removing, maintaining, or inspecting the product:
 - Wear suitable clothes and protective gear (e.g., safety glasses, gloves, and shoes) when working.
 - Turn off the main power switch of the equipment before conducting the work and take preventive measures so that the switch will not be turned on unexpectedly. Take the same precautions during a power failure.
 - Read and follow the instructions in the operation manuals and catalogs before conducting the work.
- If a load is always imposed on the equipment (e.g., hoisting equipment), eliminate the load or take appropriate measures to prevent the load from falling before performing maintenance and inspection work.

CAUTION Observe the items below to prevent accidents.

- Great force will act on the mount if the product is used for applications where the product is started and stopped frequently. Make sure that the mount is sturdy enough.
- The product is provided with an operation manual. Be sure to read the operation manual before using the product and always use the product correctly. Request an operation manual from your dealer or Tsubaki dealer if the operation manual is not on hand.
- Always make sure that the operation manual is delivered to the end user.

Warranty

1. Warranty period without charge

Tsubakimoto Sprocket Co. (hereinafter referred to as "Company") provides a warranty without charge valid for either 18 months after the shipment of the purchased product (hereinafter referred to as "Goods") from the factory, or 12 months after the first use of Goods, whichever comes first. First use of Goods is considered to be the complete incorporation of Goods into the equipment of the purchasing party (hereinafter referred to as "Customer"). This warranty may be provided with charge in certain circumstances.

2. Warranty coverage

Should any malfunction in Goods arise during the warranty period, given that Goods were properly installed, operated, and maintained as instructed in the catalog, instruction manual, or similar, Company shall promptly deliver or repair Goods or the failed part at no charge once Company has confirmed such failure. This warranty only covers delivered Goods and therefore does not include the following: ("Instruction manual or similar" includes documentation specially provided to Customer.)

- (1) Any costs required for the removal or mounting of Goods from or into Customer's equipment for repair or replacement.
- (2) Costs required for transporting Customer's equipment to repair shop, etc.
- (3) Profits lost due to a malfunction or repair, or any other consequential loss.

3. Warranty with charge

Company will charge for any investigation and repair of a malfunction in Goods (even during the warranty period) if caused by:

- (1) Improper location, installation, lubrication, or maintenance by Customer's failing to follow the catalog, instruction manual, or similar. ("Instruction manual or similar" includes documentation specially provided to Customer.)
- (2) Operation methods (including usage conditions, usage environment, and allowable values) resulting from Customer's failure to follow operation described in the catalog, instruction manual, or similar. ("Instruction manual or similar" includes documentation specially provided to Customer.)
- (3) Inappropriate disassembly, modification, alteration, or processing by Customer.
- (4) Use of Goods by Customer in conjunction with damaged or worn parts not made by Company.
- (5) Failure of operational life under conditions of use as determined by Company to satisfy operational life covered by Warranty.
- (6) Use by Customer under conditions other than those discussed.
- (7) Consumption, wear, or deterioration of bearings, oil seals, oil, and other consumable parts incorporated into Goods.
- (8) Secondary failure or malfunction resulting from malfunctioning of Customer's equipment.
- (9) Malfunction of Goods resulting from a Force Majeure such as an act of God.
- (10) Malfunction of Goods resulting from a wrongful act committed by a third party.
- (11) Any other reason that is not attributable to Company.

CAUTION

Product details described in this catalog are primarily intended to aid product selection. Always read the instruction manual before using any product to ensure correct use.
